

UI tour

Before you debug a DUT, you need a mental map of the IDE

The five panes

- Files hold project sources, open, edit, and pick the top or testbench files for the run
- Hierarchy is the elaborated instance tree
- Signals lists nets in that scope so you can add them to waves
- Wave is the timeline, cursors, zoom, and radix live there
- Console shows tool messages, display text, errors, and run or stop status

INTERACTIVE TOOL

Simulator UI tour

Document-aid literacy: map **Files**, **Hierarchy**, **Signals**, **Wave**, and **Console** in the browser HDL Simulator (not a second IDE). Starter: all five panes visited — ORIENTED.

Starter example: all five panes visited (Files · Hierarchy · Signals · Wave · Console) — map ORIENTED.

Challenges 0 / 22 cleared

Quiz: Files: The Files pane is for...

☐ project sources — open/edit and pick top / TB files

☐ only wave cursors

☐ UVM_TESTNAME selection

☐ GTKWave color themes

Core ideas

Files
Sources and top/TB pick.

Hierarchy
Instance tree / scope.

Signals
Nets to add to waves.

Wave
Timeline · cursors · radix.

Console
Sdisplay · errors · status.

Reset

ORIENTED — Files · Hierarchy · Signals · Wave · Console all visited

Lab starter

Public simulator practice

- In the public IDE, open a tiny project and deliberately click each pane once
- Say out loud what you would look for there
- That spoken map sticks better than skimming icons

Pitfalls to watch

- Do not hunt for values in Files when you need Hierarchy and Signals
- Do not treat the concept lab as a full simulator
- And do not skip Console when a run fails

Your turn

- Complete the checklist for at least one track, preferably both
- In the browser, reach oriented by visiting all five panes
- In the public IDE, name each pane's job in one sentence
- When you are ready, take the short quiz, then continue to Hello DUT
