

Hello DUT

Orientation is not enough, you need a tiny design under control

Run, Stop, Reset

- Run starts or resumes simulation time so the DUT updates each step
- Stop freezes time so you can inspect state without advancing the model
- Reset returns the DUT to its initial state and leaves the sim stopped
- Load picks which tiny sketch sits in the sandbox

INTERACTIVE TOOL

Hello DUT in browser

Document-aid literacy: load a **tiny DUT** and practice **Run** / **Stop** / **Reset** (not a full simulator IDE). Starter: counter loaded · Run → Stop → Reset done — READY.

Starter example: tiny counter loaded; Run → Stop → Reset practiced — READY.

Load starter example

Challenges 0 / 22 cleared

Quiz: Run: Run does...

☐ start or resume simulation so the DUT can update

☐ delete the project files

☐ only open GTKWave

☐ set UVM_TESTNAME

Core ideas

Load DUT

Pick a tiny module for the sandbox.

Run

Advance sim time; DUT updates.

Stop

Freeze time to inspect state.

Reset

Return to initial state, stopped.

Public simulator practice

- In the public IDE, open or paste a tiny counter with a short testbench
- Compile or elaborate, then hit Run, Stop, and Reset once each
- Confirm Console stays clean and that Reset actually clears the output you care about
- Keep the design tiny, this module is control literacy, not a full test plan

Pitfalls to watch

- Do not confuse Reset of the DUT with closing the browser tab
- Do not leave Run forever when you meant to inspect a frozen state, Stop first
- And remember

Your turn

- Complete the checklist for at least one track, preferably both
- In the browser, finish Run, Stop, and Reset on a loaded DUT
- In the public IDE, do the same triad on one tiny design
- When you are ready, take the short quiz, then continue to Step and Continue
